

TRIAL RODS

Our trial rods are used in spinal surgery. They are made of silicone with a core of stainless steel or nitinol. Thanks to the nitinol core, the trial rods return to their original shape when sterilized. The trial rods are available in different lengths and diameters.

Our Trial Rod, an overview:

20 30 40 60 70 80 90 50 100

100 - 500 mm
